# IvoSmile
Where beautiful smiles begin

Taking images (photo or video)

Ideal distance between iPad and patient:
Face is aligned with the head template

Note:
- Make sure you have sufficient brightness. A bright **light source from the front provides optimum** lighting
- Head template disappears as soon as the face is detected

Recommendation:
- Use the rear camera as it has a higher resolution than the front camera

Icons on camera

Switch between front /rear camera

Switch between live mode / still image

Video

Frames in video sequences are shown next to the video symbol and can be selected individually

Before / after view

Move slider from left to right to change between before / after view
